- Lease Management IFRS16 Compliant
- Asset Hierarchy & Lifecycle
- Work Order Management
- Maintenance Management
- Advanced Planning And Scheduling

- Compliance
- Engineering Change Control
- Equipment Management
- Fixed Assets
- Warehouse Management System and more

Stay Ahead of the Competition and Lead with Confidence
Enhance Visibility, Seamless Integration, and Efficient Business Decisions

Empower Business Growth - Develop an extensive understanding of how your operators interact best with your equipment. Utilize the integrated mappings or GIS maps that show the specific locations of your assets within the system. Have a comprehensive overview of your assets' current conditions, utilization, and value to stay on top of your operations.

Real-time Access - Review and complete your approvals for asset transfers, maintenance needs, and work assignments in just a few clicks - anytime and anywhere. Gain actionable insights through dashboards that give a 360^0 view of your entire operation, bringing all your facility and asset data together.

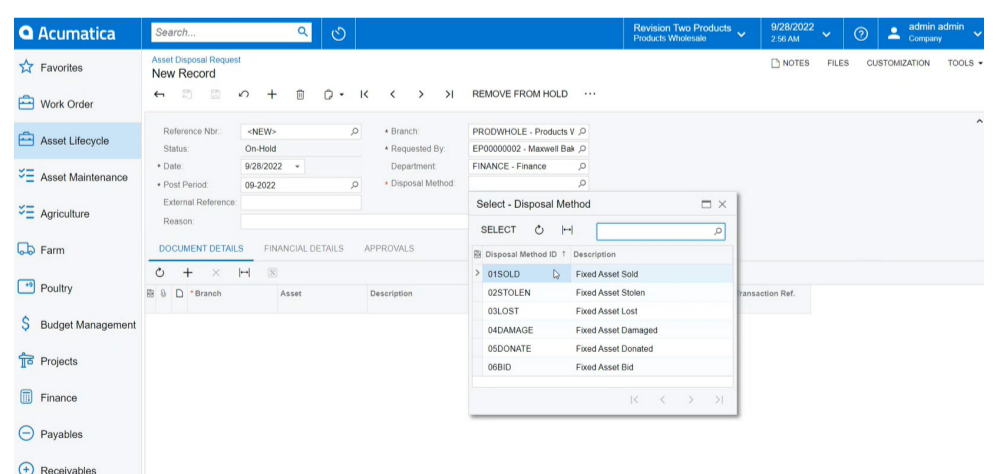

Intelligent Decision-Making - Have better data-driven decisions without sacrificing operational performance by properly structuring parent-child relationships among high-quality asset data from your equipment, machinery, and components at one or all locations. Visualize accurate measures in deciding where improvements to your maintenance processes are required.

Proactive Financial Management with Ease
Maximize Revenue Opportunities, Accurate and Reliable Reporting

Accelerate Lease Transactions - Simplify lease accounting tasks compliant with IFRS16 standards, such as tracking dates, contacts, and payments for an improved business workflow, enhancing the availability of information within a few keystrokes.

Built-in Visibility - Avoid mischarges by establishing warranty offers for equipment or components through integrated tracking of serial numbers, defining default vendors, and tracking sale and installation dates for each asset. Prevent unnecessary customer invoicing of parts and labor for works covered under warranty.

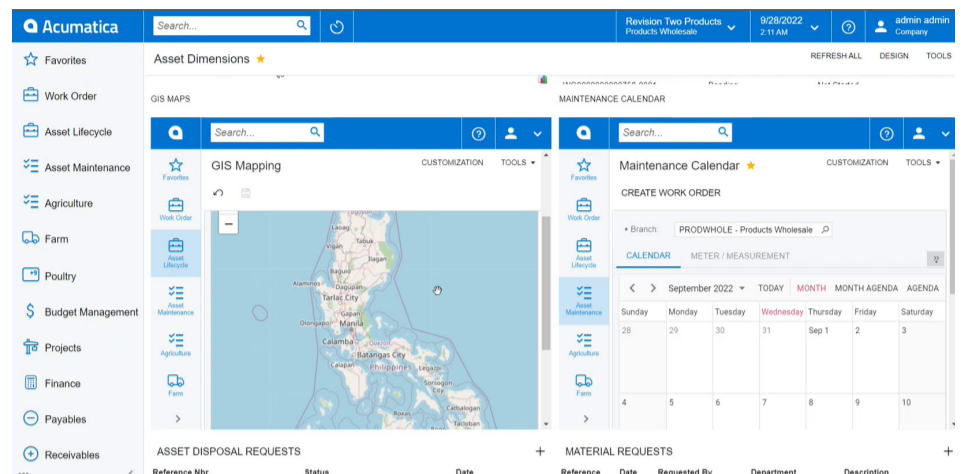

Enforce Audit Trail - Automatically create a complete audit trail of all transactions, including the identity of users who entered and approved the transaction or modified the record. Leverage compliance management by monitoring the completeness of the requirements submitted to the agreement, lien waivers, certificates, and safety notices through configurable options.

Operations Productivity and Efficiency
People and Business Synchronization, Increase Collaboration, and Effective Controls

Optimize Manpower Resourcing - Maximize dispatching and optimize the workforce by scheduling the right people at the right time with an integrated system. Accurately determine capacity requirements while providing resource utilization and efficiency reporting for high-value equipment.

Advanced Asset Tracking - Have an extensive dimension of maintenance scheduling, configuration, and data collection, so you can maintain all equipment details through a comprehensive form that tracks warranties, serial numbers, default vendors, sale dates, and installation dates.

Streamline Preventive Maintenance - Ensure seamless appointments in preventive maintenance service orders for recurring maintenance schedules or contracts. Provide faster, higher-quality maintenance services for customer equipment, maximized throughput, and capacity utilization.
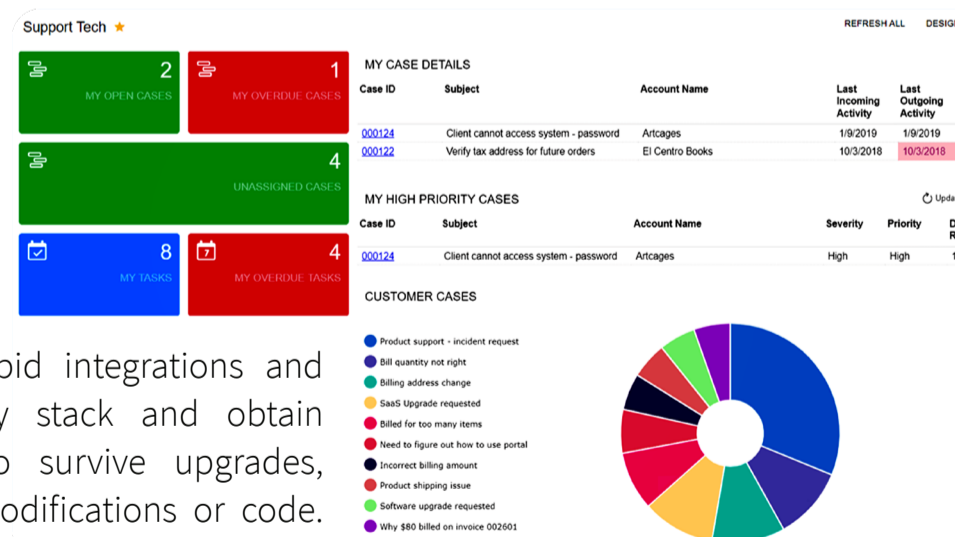

Improve Customer Service - Gain complete visibility of your customer's equipment items, including serial number, setup, history, and warranty commitments. Save your time identifying problem patterns on equipment items to schedule maintenance jobs and provide immediate resolutions.

Digital Facility Management - Efficiently operates through automated facility management that maintains records of work orders, including requests for renovations, additional work permits, violations, and other significant information. Conduct repairs and utilities geared toward reducing facility costs and improving productivity.

Customer-Friendly Tech Leadership On The Cloud
Modular Cloud Platform, Flexible Deployment, Open APIs, Optimal User Experience

Flexible Data Management – Decide where to host your data: on the public or private cloud or via on-premise. With Acumatica, secure your data with enterprise-grade security built-in features such as server-side logic, detailed access controls, and robust authentication.

Secure Your Digital Infrastructure – Acumatica deploys rapid integrations and open architecture to centralize your company's technology stack and obtain real-time insights. Deploy an ERP application designed to survive upgrades, protecting your ERP investment without costly source code modifications or code.

Foster Innovation with a Future-Proof Platform - Evolve your business with a scalable, secure, and future-proof cloud platform that provides on-the-go mobile access anytime, anywhere, on any device. Take advantage of the platform's open connectivity and rapid deployment tools to connect people, information, processes, and equipment with modern technologies.

Acumatica is the only one of the major global ERP players that have NO PER-USER FEES

Our flexible deployment and growth-friendly licensing put customers first
