

3 Benefits of Geotagging

Have employees on the go? Geotagging is great for employees who clock in when they reach their work destination, be it a worksite, another city, state, or even country, the office, and even the coffee shop! This helps managers make sure employees are clocking in at their agreed upon place of work, without the extra hassle. Check out the infographic below to find out why geotagging may be right for your workforce!

3 Benefits of Geotagging

Convenience

Geotagging lets employees who travel clock in wherever they are, all while keeping track of their locations.

Productivity

Managers don't have to constantly check in with their employees - the data is available on their timesheets.

Security

Unusual behavior, knowing who was on-site during an incident, and even contact tracing for COVID-19 and other illnesses can be tracked with geotagging.

Geotagging in LightWork Time adds geographical identification metadata to punches captured within the system from Personal and Public Kiosks. This data usually consists of latitude and longitude coordinates, though depending on the device used, this can also include altitude, accuracy data, and time stamps.
