# Netstock Predictor Inventory Advisor

An out-of-the-box solution with AI tools designed to make inventory optimization smarter and easier.

## Inventory Optimization

- Increased visibility with prioritized dashboard
- Automatically classifies inventory
- Efficiently replenish stock while reducing operating costs
- Build custom reports tailored to your business
- AI tools that deliver real results with just one click

## Inventory Forecasting

- Automatically assign the best demand forecasting models for each item, customer, region, unit, price, cost, or margin
- Generate reliable sales forecasts, factoring in seasonality and trends
- Measure the impact of future stock projections on your inventory

## Inventory Ordering

- Auto-generation of purchase orders, transfers, and production orders
- Prioritize business-critical orders  
Forward ordering and container optimization
- Redistribute inventory between multiple warehouses

## Supplier Performance

- Measure suppliers' performance
- Monitor and improve lead times
- Dynamically adjust safety stock as conditions change

# Three bundles. One scalable solution.

Netstock Predictor Inventory Advisor is tailored to enhance your inventory planning as your business scales.

## Essential

### Includes

- ✓ Single-view Dashboard
- ✓ Classification Mix
- ✓ Safety Stock
- ✓ Forecasting and Ordering
- ✓ Opportunity Engine™
- ✓ Executive Dashboard
- ✓ Supplier Performance

## Advanced

### Everything in Essential plus

- ✓ AI Pack
- ✓ Advanced Forecasting
- ✓ Stock Projection
- ✓ Extended Planning Horizon
- ✓ Report Builder

## Commercial

### Everything in Advanced plus

- ✓ Excess Redistribution
- ✓ SSO

# Add what you need when you need it

Netstock Predictor IBP lets you start with the Demand Planner module and seamlessly add Supply and Capacity modules as your business grows.

+

## Demand Planner Expert

- ✓ Pivot Forecasting® for flexible aggregation and disaggregation along any combination of product, channel, and geographic attributes
- ✓ Advanced functionality for new products, promotions, and events
- ✓ Forecast performance monitoring and reporting

++

## Supply Planning Expert

- ✓ Scalable, multi-level MRP/DRP  
Time-phased production and procurement planning
- ✓ Segmentation analysis using ABC, forecastability, velocity, and other characteristics
- ✓ Exception management, aged inventory lot tracking, and order batching

+++

## Capacity Planner Expert

- ✓ Optimized production and sourcing assignments
- ✓ Level loading to optimize capacity utilization with seasonal or irregular demand and/or supply

# Smarter planning starts with Netstock's AI Pack

Netstock's AI is purpose-built to make inventory management smarter and simpler.

Working as your trusted strategic partner, Netstock's AI tools deliver accurate, actionable insights that empower you to:

- Turn complex dashboards into clear, actionable summaries
- Optimize stock levels through tailored, item-level insights
- Resolve inventory issues independently with clear, practical solutions
- Easily understand reports with simplified explanations

## Frequently Asked Questions

### — How quickly can we get up and running with Netstock?

Netstock can be implemented in 90 days or less. Many customers see measurable results, like reduced stock-outs or lower inventory holding costs, within just weeks of going live. [Sunbeam Foods](#), based in the USA, has reduced its total inventory value by 52% and cut excess stock by 80%.

### — How does Netstock use AI in supply and demand planning?

Netstock's responsibly built AI delivers accurate, measurable insights to support confident decisions. Working behind the scenes, it interprets complex data, from executive dashboards to individual items, and turns it into clear, actionable next steps. It's like having an inventory expert in your corner, 24/7. While dashboards surface most potential issues, Elvey Security in South Africa relies on Netstock's AI to uncover the critical 10% that might otherwise be missed. These deeper insights help them stay fully informed and proactive, ensuring they can respond quickly to emerging challenges.

### — How long does implementation take?

Netstock's implementation process typically takes 6-10 weeks. However, the timeline can vary depending on the complexity of your customer's data, the size of your business, and the specific ERP system being integrated. The process is designed to be straightforward, and a dedicated [customer support](#) team ensures a smooth transition. Netstock also offers training and guidance throughout the setup to help users get up and running quickly.

### — What kind of ROI can we expect?

Customers typically experience ROI within the first few weeks of Netstock's implementation. With Netstock, customers experience on average (and sometimes much more!) 15% improvement in fill rate, 70% time saved on ordering & demand planning, 25% reduced inventory levels, and a 50% increase in forecasting accuracy. Since partnering with Netstock in January 2022, [Davies Textiles](#) reduced surplus orders from \$3.8 million to under \$1 million within eleven months, focusing on just 19 items. Their customer fill rate also improved significantly, increasing from 89.4% to 95%.

### — How does Netstock integrate with our ERP system?

Netstock integrates with over 60 of the world's leading ERPs, such as [Sage](#), [Acumatica](#), [Microsoft Dynamics](#), [NetSuite](#), [SAP Business One](#), and [MYOB](#). You can find the full list of ERPs [here](#). Netstock layers predictive intelligence onto your ERP data to turn raw data into clear, actionable insights, creating a centralized platform for accurate inventory and demand planning that drives smarter decisions across your supply chain.

### — What does Netstock do that our ERP system can't?

ERPs are great at storing and processing transactional and historical data but aren't built for advanced supply and demand planning. Netstock turns your ERP data into clear, prioritized insights, using AI to forecast demand, recommend orders, optimize inventory levels, and plan for future scenarios.

### — What if I'm planning to change to a new ERP?

Implementing a new ERP is complex and often doesn't go as planned. Starting with Netstock in the existing ERP makes switching to the new system later much easier. Simply disconnect from the old ERP and link to the new one, ensuring continuity in inventory planning.
